

(B) BUY YOUR OWN GEOBIS NET AVL VMS GPS SYSTEM WITH YOUR OWN WEB SERVERS AND CHANNELS

This alternative is the one that permits your company to track online mobile assets, vehicles, trucks, containers, busses, boats, planes, etc through your own channels and web server architecture 24 hours a day, 7 days a week, 52 weeks per year.

▣ **Requirements for this alternative :**

Buy your own web servers and channels as well as software and other requirements. This alternative starts functioning with only a single AVL/GPS unit. This unit transmits its location values and clients additional configurable data requirements, to the web server. You will then be ready to access the information, as limited as you want, for the users who subscribe to your system.

It is required to buy the Geobis digital maps for a perfect performance of this system.

▣ **How it works :**

Normally a single AVL/GPS unit receives satellite information and then this information is processed to find the real geographic position. This information is stored in the AVL/GPS unit's memory. With some periodicity, this information is delivered to your web server in a central command office. How is this information delivered? Each AVL/GPS unit includes a Cellular phone or a Satellite Transmitter to transmit the position of mobile assets, vehicles, trucks, containers, busses boats, planes, etc.

Note : Geobis International does not bring any airtime for local communication by Cellular Phone and or for a Satellite. Owners of the AVL/GPS units will need to buy the airtime for one or both alternatives of communication.
